

CO₂CARE

CO₂Care by Dairei Europe
Our contribution to a
sustainable environment
and a smaller carbon footprint

More environment

Global responsibility is brought into focus, together with a better environment, a cleaner nature and less consumption of natural resources. Dairei would also like to contribute to a more sustainable behavior. That is why we are introducing the CO₂Care concept.

Take your responsibility for the future

- Reduce your CO₂ emission

Less energy

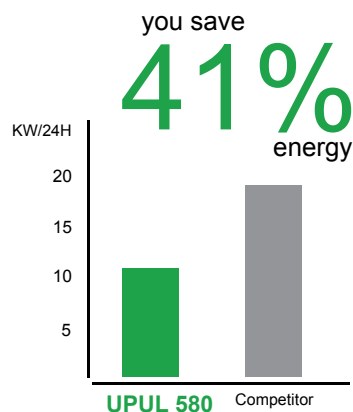

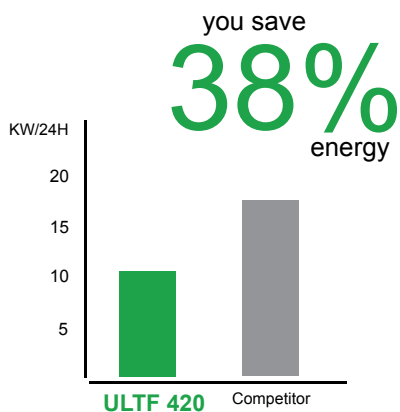

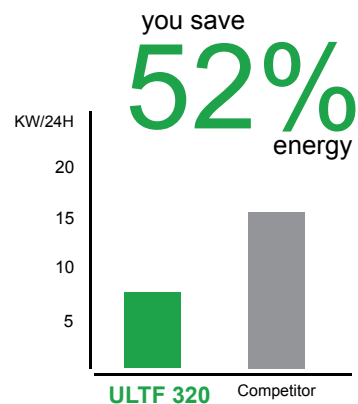

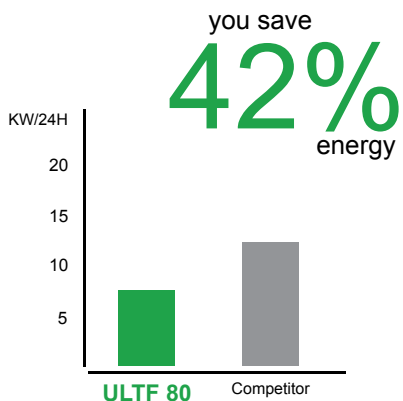

Our CO₂Care products are not only combining aesthetics and function. They are noted for being extremely energy efficient compared to other products on the market. That means less CO₂ emission and a significant saving on the electrical bill.

More profit

Less emissions of CO₂ serve both the environment and the profit. So there is advantages for both the conscience and the bottom line if you choose one of our CO₂Care ultra low temperature freezers.

Based on cold facts and the new CO₂Care concept Dairei call on you: Lets make a difference together.

More responsibility

CO₂ is the mayor culprit when it comes to climate changes. The IPCC – Intergovernmental Panel of Climate Change - estimates a rise of the average temperature at 2-4 degrees in this century, if we do not change behavior. It means that the ice at the poles will melt and that the sea level will rise about 0,2 – 0,6 meters during the next 100 years. If this development is to be curbed we have to reduce the emissions of CO₂. We must in other words save energy.

Without a reduction of our current CO₂ emissions, we'll reach a point of no return
